

Bar Coding Solutions for your Business... Integrated into Sage Software

The Datalinx Time Manager Solution

The Datalinx Time Manager solution is an advanced, automatic, time and attendance system which manages and reports on an organisation's workforce attendance by exception. It reduces the management time needed to run the solution enabling a business to achieve visibility of staff and see the status of individual employees at any time. Time Manager provides a key management tool within the human resources and labour planning of a company.

The Time Manager clocking functions provide attendance records for every member of staff and handle comprehensive shift patterns, enabling the tracking of personnel, contractors and flexitime workers. Time Manager provides detailed reporting by exception, as opposed to the traditional paper based method of presenting information for management to review. Data is updated from Time Manager into payroll systems such as Sage Line 50, Line 100, Sage MMS, Line 200, Line 500 and Sage 1000.

In the event of a building evacuation and in the interest of health and safety, Time Manager is able to provide automatic roll call reports by muster points. In addition to this, should an organisation wish to monitor the complex requirements of the EU working regulations, the Datalinx Time Manager solution provides full reporting to ensure that the rules and regulations of the European Working Time Directive are adhered to.

Time Manager, the time and attendance solution from Datalinx, provides users with the ability to produce ID badges on-site. These may be simple laminated cards or complex full colour photograph ID badge cards. As an extension to the time and attendance capabilities, Time Manager has an add-on module to assist with access control, enabling a business to restrict the access of selected personnel or visitors.

Personnel Clocking

- Time and date stamped transactions
- Employee utilised ID badges
- Employee clock in feedback
- Multiple card technologies
- Multiple clocking points
- Real-time information

Software Interface

- Management reporting
- Access control options
- Integration to payroll
- WIP tracking options
- Job costing options
- Fire alarm roll call

Time and Attendance

- Global and individual calendars
- Management by exception
- Continental shift patterns
- Flexitime options
- Employee status
- Off-site working

Management Control

- Working Time Directive reporting
- Centralised or distributed control
- Reduced payroll administration
- On-line employee validation
- Management by exception
- Reduction of errors

Hardware

The Datalinx Time Manager solution utilises traditional swipe card terminals or the latest information window based terminals, which allows Time Manager to feedback specific data to the operator. All terminals are connected back to the host in real-time via an organisation's ethernet connection. The introduction of this new technology, to the Time Manager solution, has increased the options that exist within the design element of producing ID badges. The badge itself becomes a means to carry technology. This may be an obscured bar code, magnetic stripe or proximity strip card.

About Datalinx

Datalinx develop software solutions that integrate into Sage Line 50, Line 100, Sage MMS, Line 200, Line 500 and Sage 1000 and have been supplying the Sage marketplace for the last decade. In this time, Datalinx has become recognised as the leading provider of bar code based solutions for Sage.

Datalinx have the capability and knowledge to guide and advise a business in all aspects of the project implementation process, including recommendations on the best procedures and practices that should be deployed within an organisation's business environment. Datalinx demonstrate and supply the latest hardware, wireless LAN technology and bar code symbologies for use in conjunction with Datalinx software solutions.

Datalinx software solutions are written and developed exclusively by Datalinx, providing the capability to support and train users on all aspects of the software solution.
